Cover Letter

Dear Hiring Team,

I am currently studying Front-End Development at Noroff Fagskole, where I am building my skills in HTML, CSS and JavaScript. I became interested in Front-End Development because it combines two things I enjoy: technology and creativity. I like taking an idea and turning it into something functional, responsive and visually engaging.

During my studies, I have worked on several projects that have allowed me to develop my technical and creative skills. Projects such as Rainy Days, Community Science Museum and STUFF have given me practical experience with responsive design, JavaScript, APIs, Git and GitHub, Figma and accessibility. They have also taught me the importance of testing, solving problems and improving a project through iteration.

What I enjoy most about Front-End Development is the combination of structure and creativity. I am particularly interested in modern, minimal and user-friendly interfaces, and I enjoy paying attention to the small interactions and details that can improve the overall experience of a website.

Before starting my studies, I gained several years of experience in hospitality, customer service and administration. These roles helped me develop communication, teamwork, responsibility and the ability to work effectively in different environments. I believe these are valuable skills to bring into a professional development team alongside the technical skills I am building.

I am currently looking to continue developing my skills, gain practical experience and learn from people with experience in the industry. I am curious, persistent and motivated to keep improving, and I enjoy learning through hands-on projects and new challenges.

Thank you for taking the time to learn more about me and my background.

Kind regards,

Cesar Castillo
